

FOODWISE

Healthy food should not be a luxury.
Making the barriers visible so we can act on them.

THE PROBLEM

43.5–43.9 million people (about 76–77%) cannot afford a healthy diet; the estimated daily cost is **KSh 189–582** depending on method.* In September 2026, KNBS reported **9.5% annual food and non-alcoholic beverages inflation**.

THE SOLUTION

Price Intelligence tracks staple and nutritious food prices. **Household Pressure Score** estimates the income share needed for a healthy diet. **Diet Gap Analysis** compares the cost of a healthy diet with a cheapest-calorie diet and highlights nutrient cost barriers.

WHAT IS READY

A concept-stage spreadsheet prototype uses public WFP Kenya market-price observations, with a household basket calculator and price-trend charts. Data coverage varies by market; the prototype's editable quantities and pressure thresholds need validation before policy use.

NEXT STEP

Partner with a county, nutrition expert and local data users to validate the basket, expand market coverage and run a county-level pilot.
